		Yours very truly,	
	Dear Bill: I received that your develor coming along sate. We have four ments for equipmed slightly larger does meet the majour interest in who was with me to be out on the can not be defin when he arrives you have available. We sure that work and I am sure that work and I am sure that the can be defined as the can be defined	Dear Bill: I received your letter of 21 that your development of the small coming along satisfactorily. We have found it necessary to ments for equipment of this naturalightly larger and heaver than we does meet the majority of our requour interest in an extremely small who was with me the day we were go to be out on the west coast somet can not be definitely determined when he arrives and would be very you have available and reviewing work and I am sure that	This document is part of an integrated file. If separated from the file it must be subjected to individual systematic review. I received your letter of 21 October and was happy to hear that your development of the small four cycle sleeve engine was coming along satisfactorily. We have found it necessary to fulfill our immediate requirements for equipment of this nature with an engine generator set slightly larger and heaver than we would normally like. The unit does meet the majority of our requirements but does not rule out our interest in an extremely small light-weight unit. Who was with me the day we were guests at your plant, is expected to be out on the west coast sometime in November, the exact date can not be definitely determined at this time. Don will call when he arrives and would be very interested in inspecting what you have available and reviewing what we have in mind. We sure thank you for giving us the latest "dope" on your work and I am sure that will be very interested in seeing it.
